

We are abbuters to the proposed asphalt plant. We have lived here for forty five years. It has not been easy being next to the blasting over the years by both Quinn and Granite State Concrete, but we feel the asphalt plant is a serious escalation of constant noise, and especially of concern are potentially harmful toxins in the emissions. We are very concerned there will be constant smells which nobody will acknowledge may be

very harmful long term. Also noise of trucks and danger of said trucks to the children using Goss Park in the summer. Such a tall structure will certainly be an eye sore

In short, as abbuters we are very much opposed to this proposal
